

Browser Object Model

The **Browser Object Model** (BOM) is used to interact with the browser.

The default object of browser is window means you can call all the functions of window by specifying window or directly. For example:

```
window.alert("hello javatpoint");
```

is same as:

```
alert("hello javatpoint");
```

You can use a lot of properties (other objects) defined underneath the window object like document, history, screen, navigator, location, innerHeight, innerWidth,

Table in SQL

The SQL CREATE TABLE Statement

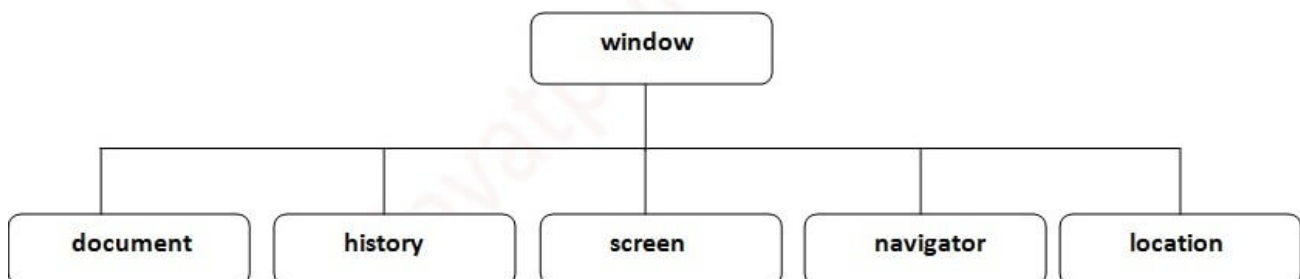

The CREATE TABLE statement is used to create a new table in a database.

Syntax

```
CREATE TABLE table name ( column1 datatype, column2 datatype, column3 datatype, ...);
```

java point

Note: The document object represents an html document. It forms DOM (Document Object Model).
